SUMMARY

BS-IT student (5th semester, CGPA 3.55/4.00) who builds and ships full-stack applications: Next.js front ends, Node/Express back ends, PostgreSQL with Prisma, and LLM features that read and write live database records through tool calling. Three deployed projects with public repositories, including an AI career platform with a four-tool assistant and a measured 93.33% job extraction accuracy.

EDUCATION

BS Information Technology — Government Graduate College, Civil Lines, Sheikhupura
2024 – Expected October 2028 · 5th semester · CGPA 3.55 / 4.00
Coursework: Database Systems, Object-Oriented Programming, Web Technologies

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL, C++
Frontend: React, Next.js (App Router), Tailwind CSS, HTML5, CSS3
Backend: Node.js, Express, REST APIs, server actions, route handlers
Databases: PostgreSQL, Prisma ORM, Redis, MySQL, MongoDB
AI: Vercel AI SDK, function/tool calling, structured output with generateObject, response streaming, prompt design, Groq, Gemini and OpenAI APIs
Auth: NextAuth (Google, GitHub OAuth), Passport.js, bcrypt, HTTP-only cookie sessions **Validation:**
Zod, shared client/server schemas
Tooling: Git, GitHub, Vercel, Render, Neon, Postman

PROJECTS

CareerSyncAI — AI Career Management Platform
Next.js (App Router), PostgreSQL on Neon, Prisma, Zod, NextAuth, Tailwind, Vercel AI SDK, Groq (Llama 3.3 70B)
Live: career-sync-ai-dun.vercel.app · **Code:** github.com/qh8773127-star/CareerSyncAi
- Built a career app where a user pastes a job description, the app pulls the role, company and skills into structured fields, and tracks each application through stages.
- Wired the LLM to four database tools — getApplications, addApplication, updateApplicationStatus, deleteApplication — using provider-native function calling throughthe Vercel AI SDK, so plain-English requests trigger the right CRUD operation. Responses stream to the browser with streamText and useChat.
- Constrained extraction with Zod schemas through generateObject so generated records match the Prisma model exactly, then scored it with an eval harness over 100labelled job descriptions: 93.33% correct.
- Closed a duplicate-charge hole in the quota system: a Redis sliding-window limiter caps each user at 5 AI requests per minute, and a unique requestId on QuotaOperation plus the UserApiLimit model make a repeat charge impossible when two requests land at the same time.
- Kept the dashboard off the database by caching the job-stats query in Redis and adding composite indexes on (userId, status) and (userId, createdAt) for filtered andsorted lists.

Team Task Manager — Team Collaboration Platform
React, Express, PostgreSQL (raw SQL via pg), Passport.js, bcrypt
Live: team-task-manager-ui-7xfl.onrender.com · **Code:** github.com/qh8773127-star/team-task-manager
- Built a multi-user task manager where teams are created, tasks are assigned to members and moved across statuses. 12 REST routes across auth, team and taskrouters.
- Wrote team creation as a single Postgres transaction that inserts the team row and the creator's membership row together, so a failed second insert never leaves ateam without an owner.
- Modelled five tables with explicit ON DELETE CASCADE on every foreign key and a composite primary key on (team_id, user_id) in team_members to block duplicatejoins. Sessions are HTTP-only cookies issued by Passport, passwords hashed with bcrypt.
- Verified multi-account behaviour with two separate users logged in at once, confirming shared team data renders correctly for both.

Personal Portfolio — Next.js, Tailwind CSS, Vercel
Live: ali-haider-dev.vercel.app
- Responsive portfolio with project write-ups, live links and a contact form.

EXPERIENCE

Computer Science Teacher — Star High School, Farooqabad · 3 months
- Taught computer science to school-level students, covering programming fundamentals and basic computer concepts.

LANGUAGES Urdu (native), English (professional)
